

IN THE SPECIFICATION:

After the description and before the examples section please insert the following new paragraph:

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 shows the kinetics of intracellular CD154 expression, as determined in antigen-reactive Th cells following *in vitro* stimulation of human whole blood using the superantigen staphylococcus enterotoxin B (SEB).

FIG. 2 shows the detection of tetanus toxoid (TT)-specific Th cells and allergen-specific Th cells in human whole blood, independent of the type of reactively produced cytokines after *in vitro* stimulation with TT and allergen.

FIG. 3 shows the isolation of living tetanus toxoid (TT)-specific Th cells, based on reactive CD154 expression, from human peripheral mononuclear cells after *in vitro* stimulation with TT.
